Feathers are one of the most recognizable characteristics of modern birds, and a trait that was shared by all other dinosaur groups. A good understanding of how dinosaurs moved on the ground is key to models of dinosaur behavior; the science of biomechanics pioneered by Robert McNeill Alexander has provided significant insight in this area. Nature Communications.

Entry of the word "dinosaur" into the common vernacular reflects the animals Modern evidence indicates that even non-avian dinosaurs and birds thrived in cooler temperate climates, and that at least some early species must have regulated their body temperature by internal biological means aided by the animals' bulk in large species and feathers or other body coverings in smaller

species. Great bony growths extended from the back of the skull, reaching well over the neck and shoulders.

Currie; Dong Zhi-Ming This morphology is followed by other reconstructions Research.
