**Calculus - Limits of Functions (solutions, examples, videos)**  
 Problems. Answers to Odd-Numbered Exercises. Part 2. LIMITS AND CONTINUITY. Chapter 4. LIMITS. Background.

**Math Exercises & Math Problems: Limit of a Function**  
 For problems 1 - 9 evaluate the limit, if it exists.  
 $\lim_{x \rightarrow 2} (8 + 3x + 12x^2)$      $\lim_{x \rightarrow 2} (8 + 3x + 12x^2)$  Solution;  
 $\lim_{t \rightarrow 3} (36 + 4t^2 + 1)$      $\lim_{t \rightarrow 3} (36 + 4t^2 + 1)$

Solution: This is the reciprocal of the previous problem, and hence tends to 0. Solution: As each function is continuous, the limit is obtained by.

Douglas, Kenya. I am the owner, or an agent authorized to act on behalf of the owner of an exclusive right that is allegedly infringed. The exponential function is positive for all  $x$  therefore the denominator of the function cannot be annulled. To solve an undefined limit, see examples 5 and 6 of limits that needs simplification. Step 2 Answer The numerator approaches 8, so it will be positive. Instead, we'll do some algebra first to see if we can trim off any fat. It is important to state again that when we write. The graph of this function is shown. Yet the limit as  $x$  approaches 2 -- whether a constant factor may pass through the limit sign.
